

# Decentralized Social Network

## Members:

Viktor Stanchev, Jerry (Zijian) Feng, Anushervon Saidmuradov, Rui Zhao, Arash Mortazavi

## Customer:

AP Bernard Wong

# Team Structure

## Front-end

- Anushervon (SM)
- Jerry

## Back-end

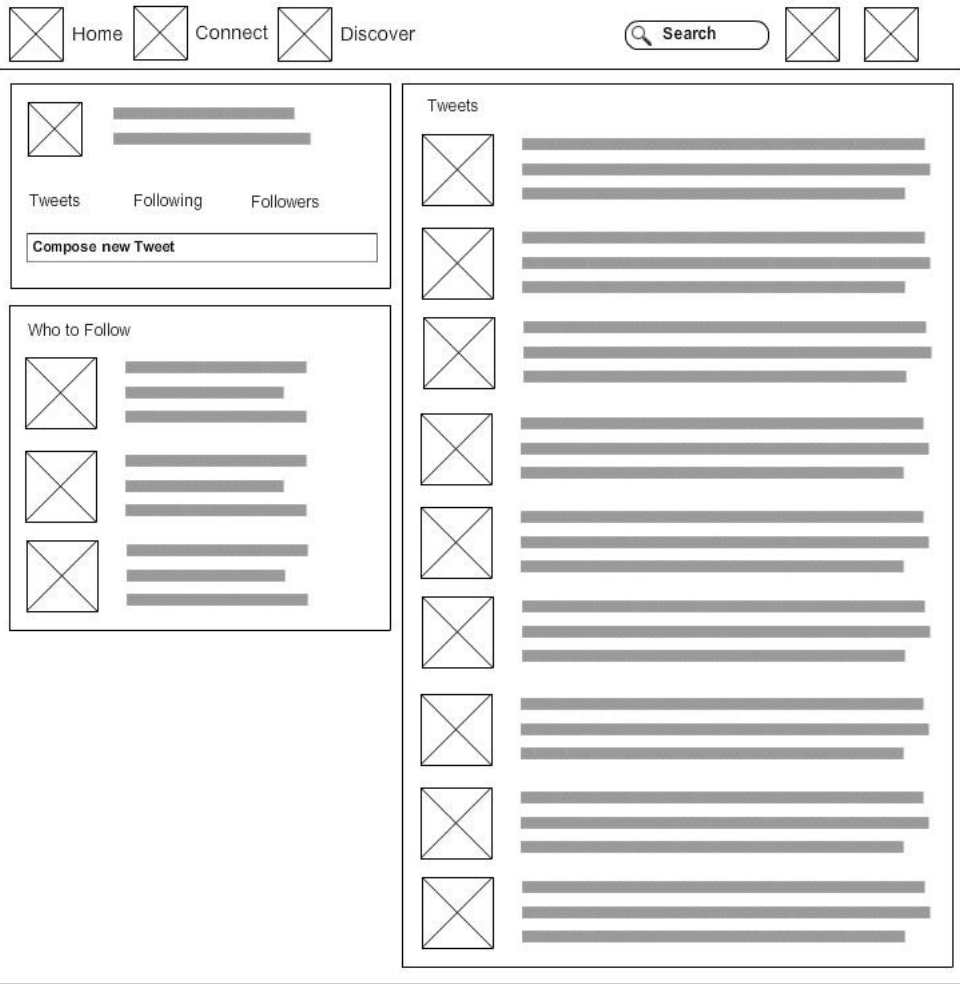

- Viktor (PO)
- Rui
- Arash

# I2 Backlog

- Create wireframes of common social networks.
- Create wireframe for a sample view in our project.
- Add front-end infrastructure.
- Explore C++ as an option for the backend server.
- Explore other language options (Python, Scala).

Level of Trust

# Front-end Infrastructure

- AngularJS (CoffeeScript)
- Zurb Foundation (CSS)
- Slim (HTML)
- Yo (Scaffolding)
- Grunt (Build tool)
- Bower (Package manager)

# GNUnet

- Building
- Starting peers
- GNS
- DHT experiment
- GNUnet command line tools

# C++, Java, Python

- C++ is a waste of time
- Java bindings incomplete
  - only contain a subset of GUNet C API
- Python can work with GUNet C API by writing another C Layer
  - use Flask as basic server framework
  - SQLite3 as local persistent storage
  - easy web socket support

# I2 Retrospective

- Github as issue tracker == Good
  - <https://github.com/n00shie/fuzzy-octo-ironman>
- Need to pick stable revision of GUNet
- Less standups per week
- IRC is very helpful
- Delegate work better => Vert. then Horizontal
- Group education / Code reviews
- Better Documentation
